Gauges

Principle of REFCO Gauges

Bellow Type Gauge Class 1.0

The metal-bellow-type gauges are very sensitive and therefore absolutely accurate (class 1).
 The hardened steel spring **A** includes the brazed metal-bellow **S** and is slightly bent under a load (see drawing).
 This combination set is tied up with the system-holder **R**, which is mounted on the gauge-housing **a - b**.
 The working fork **F** is connected with the gauge-mechanism. If pressure **P** is applied to the gauge the metal-bellow **S** will activate the working fork **F** and the pointer will show correct reading on the scale.

Metal-bellow-type gauges are extremely over-pressure resistant and made according to accuracy class 1.
 If for instance to a compound gauge with a range from -1 to 10 bar respectively -30 + 140 psi an overpressure of 25 bar = 350 psi is applied, the pointer will turn around 2 1/2 times.
 After release of the pressure the gauge is still in perfect condition and the pointer should only be slightly re-calibrated with the zero-screw **V**.
 A Bourdon-type gauge would never stand such an over-pressure and would be destroyed.

- A - Steel spring
- S - Metal-Bellow
- R - System holder
- F - Working fork
- V - Zero-Screw
- P - Pressure inlet

Bourdon Type Gauge Class 1.0 and 1.6

Conversion of a pressure p into a way s

Under pressure the flattened, hollow tube is trying to reach it's circular perfect condition.
 The movement of the tube end is carried forward over the pull rod to an internal mechanical movement and is converted into a rotation of the gauge needle.

Pressure Gauges

REFCO Gauges

General Information

Class 1 vs. Class 1.6 vs. Class 2 accuracy gauges

Class 1 gauges are accurate within ± 1 percent reading all the way around the gauge dial. These gauges are the most accurate offered by REFCO.

Class 1.6 gauges are accurate within ± 1.6 percent reading all the way around the gauge dial. These gauges are also very accurate and are the standard accuracy gauge offered by REFCO.

Class 2.0 gauges are accurate within ± 2 percent over the first $1/3$ of the gauge dial, ± 3 percent over the next $1/3$ of the gauge dial and then ± 2 percent over the last $1/3$ of the gauge dial. This is commonly called 2-3-2 accuracy. These gauges are least accurate where most of the readings are taken.

REFCO uses as standard on manifolds Class 1.6 accuracy gauges and on higher end manifolds Class 1.0 accuracy gauges. Most competitors use as standard the Class 2 or 2-3-2 accuracy gauges. This makes REFCO manifolds more accurate. REFCO DOES NOT USE ANY CLASS 2 or 2-3-2 accuracy GAUGES ON ITS MANIFOLDS. Unlike many service tool suppliers REFCO manufactures their own gauges.

Pressure Gauges

Bellow Type, Class 1.0 Gauges, Oil Filled and Dry Execution

Fundamentals of a Bellow Gauge – The best gauge you'll ever have.

A metal bellow type gauge is very sensitive and therefore much more accurate than a standard bourdon tube gauge.

The main benefit of a bellow type gauge is that it is extremely accurate and highly over-pressure resistant.

The bellow gauge is accurate within 1% around the gauge face and can withstand up to 2.5 times over-pressurization without damage to the gauge.

A bourdon tube gauge would never withstand this type of over-pressurization.

- Zero point adjustable
- All anodized aluminum body, no plastic

Leak Detection

REF-LOCATOR

Electronic Leak Detector

The requirements for leak detectors are constantly increasing and in order to keep up with the newest developments and technologies, we have developed the REF-LOCATOR. This high-end unit fulfills all the specifications and requirements which are expected from a modern leak detector today.

The basis of solid electrolyte sensor technology sets new standards in the area of leak detection. The sensor has a higher than average life cycle of approximately 10 years, which is a large advantage over conventional leak detectors. With the large LCD display, one is always informed about the ongoing activities.

Through the adjustment of the 3 sensitivity levels, it is easy to localize large leaks. In addition, the inspection light is ideal for having a good overview, even in the dark. The REF-LOCATOR is delivered in a practical, rugged case.

TRACE-LOCATOR

Electronic Leak Detector

The leak detector for professional leak detection with trace gas 95/5 (95% nitrogen, 5% hydrogen), featuring the latest technology. The 95/5 trace gas is environmentally friendly, non-toxic, nonflammable and non-corrosive. The gas escapes at the leaky spot which then can easily be localized with the TRACE-LOCATOR. In addition, after evacuating the unit, the nitrogen in the trace gas binds with the possible remaining moisture. Additionally, during and after the leak detection, no environmentally harmful refrigerants will leak out. Due to the low density of hydrogen which is lighter than air, even minor leakages can be detected quickly. By means of a colored pie chart, the large LCD display, always shows the latest data. The TRACE-LOCATOR is delivered in a practical, rugged case.

INVERTER CHECK-KIT

The Inverter Check-Kit is an invaluable tool for the analysis of problems with Duct Free Mini Split Systems. The kit is designed to be used in both installation and maintenance of Duct Free Systems.

The Inverter Check-Kit performs two basic functions. First it will tell you if the phase outputs in the inverter are operating correctly. Secondly, the data flow function tells you if there is data flowing in both directions between the indoor and outdoor sections. Since inverters are controlled by solid state boards that do multiple functions, the Inverter Check-Kit will tell you if there is a bad board and help you identify if the indoor, outdoor or both boards are not functioning correctly.

The inverter phase checker will indicate whether the Inverter board is faulty and by implication (if the inverter works then the compressor must be faulty) whether the compressor is faulty but it will not work if there are faults on both.

The kit comes complete with the electronic module with a set of leads for testing the serial communication links, as well as a selection of cables and connectors for the power output terminals of the inverter.
